Location/Description

In Fiscal Year 1999, no Section 22 work was initiated in North Dakota. North Dakota has identified a need for future Section 22 work along the Red River main stem, in the Devils Lake subbasin, and County/Local Watershed Planning Assistance. Future work will depend on the availability of both Federal and non-Federal funds. The State of North Dakota continues to strongly support this program.

The program area covers the entire State of North Dakota. St. Paul District, Corps of Engineers is the lead office and is responsible for work items in the Red River of the North and Souris River basins. Omaha District handles work that falls within the Missouri and James River basin boundaries.

Status

In Fiscal Year 1999, no Section 22 work was initiated in North Dakota. North Dakota has identified a need for future Section 22 work along the Red River main stem, in the Devils Lake subbasin, and County/Local Watershed Planning Assistance. Future work will depend on the availability of both Federal and non-Federal funds. The State of North Dakota continues to strongly support this program.

Authority

Section 22 of the Water Resources Development Act of 1974, as amended. This program provides planning assistance to States and Indian Tribes in preparation of plans to manage water and related land resources within their boundaries. Assistance is given within the limits of available appropriations, but \$500,000 is the maximum Federal funds available to any State or Indian Tribe annually. Non-Federal cost sharing of this program is 50 percent.

Fiscal

In Fiscal Year 1999, because of State budget constraints, the State of North Dakota opted not to initiate new Section 22 work.
